

Let's work together to improve
our water quality!

Take the pledge today at:
tghyp.com

THE PLEDGE:

"I pledge to take care of my yard without synthetic pesticides, weed killers, or chemical fertilizers, except on rare occasions, to resolve an infestation or to improve habitat for native plants and wildlife. I also pledge not to flush pharmaceutical drugs or household chemicals down drains or toilets."

DID YOU KNOW? **Pesticides** from our lawns and gardens are in **our drinking water**. They aren't filtered out, and they have recently been found to be dangerous even at very small amounts. They are in **bottled water, too**. It is easy to prevent them from getting into **our water** supply by not using them. Scientific studies from top tier journals show that they cause increases in diabetes, cancer, and abnormal development of the brain and nervous system in very small amounts by disrupting our hormonal systems.

This is the most widespread problem affecting our water - and it is easy to change!

THE PROJECT: Together, we can solve this problem by committing to care for our yards without the use of synthetic chemicals, and not disposing of drugs down the drain. **We can have beautiful yards and gardens without these chemicals.**

One simple thing we can do together for clean water!

We want to hear from you!
